GREGORY BOXTA

An extremely comfortable and reliable solution to office seating

Boxta

Manufactured in Australia, Gregory chairs are recognised by ergonomists, the medical and OH&S professionals as providing the best possible seating solution for the modern office and an extremely high level of comfort. Many of Australia's top 100 companies now use Gregory either as their primary office chair or as an aid for staff with back or work related injuries.

So what does dual density mean?

The seat features two different densities of moulded foam - softer in the back section and firmer in the front - indicated by the split. The pelvis gently 'sinks' and is supported in the softer section in the correct seating position at the back of the chair. Firmer foam at the front discourages the pelvis from sliding forward into the slouching "C" curve of poor posture. The moulded (or shaped) foam also encourages and improves blood circulation behind the thighs. With the added adjustable lumbar support the spine is maintained in the healthy, upright "S" curve of good posture which also creates less stress on the arms, shoulders and neck throughout the day.

- Height adjustable seat and backrest
- Ergonomic seat and back tilt adjustment
- Most chairs are also available with Plastic Back option
- Optional Spider Aluminium Base
- AFRDI Level 6 applies only to chairs with standard mechanisms

Scientific evaluation

Gregory uses scientific evaluation in the testing of its products. Thermographs show surface temperatures and indicate the difference in blood flow in the body after sitting over a period of time in a Gregory chair compared to an ordinary chair. Surface temperature is a function of the heat imparted by the body's circulation system. This means that warmer temperatures on the body's surface shows greater blood flow in the measured area. Small changes in surface temperature indicate larger changes in the deeper tissues. White areas show increased blood flow.

Healthy 'S' curve where head is properly balanced on top of the spine

Gregory chair
Higher surface temperature indicate larger changes in deep tissues and greater blood flow

Ordinary chair
Lower surface temperature indicate lesser blood flow and less comfort
