ergonomic to the core

On average, we spend 80% of our time in the office sitting down.

It makes sense then to choose an ergonomically designed chair – one, which not only makes us comfortable, but also provides the kind of support and posture control that physiotherapists and OH&S professionals recommend.

With the dual density posture support system, all Gregory executive chairs more than meet these requirements.

The fact that they look superb is just another bonus.

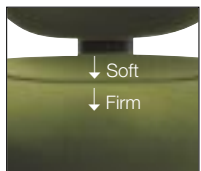

Sarvi with deluxe aluminium base and deluxe arms

Gregory chairs are recognised by occupational health and safety professionals as providing superior ergonomic seating solutions.

Central to the Gregory ergonomic design philosophy is the **patented dual density posture support system**. It delivers long term support with minimum muscular effort.

Developed by physiotherapist Peter Gregory, in 1987 – the system has been continuously refined with extensive research and development. Today, Gregory offers a full range of seating solutions for the whole work area.

So how does dual density work?

The seat features two different densities of moulded foam.

This allows the pelvis to sink into the softer back section. The firmer foam at the front discourages the pelvis from sliding forward and physically

helps you to maintain the correct seating position. The specially moulded foam also encourages your legs to be slightly apart, thus creating a wider base of support.

In essence, the dual density solution physically encourages the “S” curve of good posture and helps to prevent the uncomfortable and potentially harmful, slouching “C” curve of poor posture.

For a more detailed explanation of the Gregory chair design, please refer to our website: www.gregorychairs.com.au.

5 year warranty

- Advanced synchronised action
- Tension adjustment to suit user's height and weight
- Height adjustable seat
- Pronounced wrap around lumbar support
- Fully upholstered backrest
- Flexing arms
- Standard black base
- Optional aluminium base

inca

- Adjustable seat height with free float locking mechanism
- Tension adjustment to suit user's height and weight
- Additional forward tilt action to ensure optimal support in every position
- Height adjustable seat
- Non height adjustable back with lumbar support
- Impact resistant back shell can also be upholstered
- Height adjustable T-arms
- Standard black base
- Optional aluminium base
- Fixed height, non adjustable Cantilever also available with chrome plated frame

slimline

- Advanced synchronised mechanism (also available with standard free float mechanism)
- Tension adjustment to suit user's height and weight
- Height adjustable seat
- Pronounced height adjustable lumbar support
- Handcrafted range with fully upholstered backrest
- Standard height adjustable D-arms, optional extra deluxe arms
- Standard black base
- Optional aluminium base
- Fixed height, non adjustable Cantilever available with chrome plated frame
