Gregory Inca

An Extremely Comfortable And Reliable Ergonomic Solution To Office Seating With Patented Dual Density Posture Support System

GREGORY
ergonomic to the core

Adjusts to suit your body with the highest OH&S standards and improve performance and overall well-being

Manufactured in Australia, Gregory chairs are recognised by ergonomists, the medical and OH&S professionals as providing the best possible seating solution for the modern office and an extremely high level of comfort. Many of Australia's top 100 companies now use Gregory either as their primary office chair or as an aid for staff with back or work related injuries.

Based on results of ergonomic evaluation the Inca range of chairs have proven to be superior in reducing OH&S risks, looking after employee well-being while providing exceptional comfort.

A complete family of chairs that suit a whole range of people with small, standard and large seat options. Large seat Inca chairs can be fitted with a heavy-duty kit to support up to 160kg and heavy-duty use.

Ergonomic to the core

Ergonomics is about 'fitting the environment to the human form'. Ergonomic seating has become so important today because the average office worker spends up to 80% of their time in a chair.

Patented dual density posture support system

The seat features two different densities of moulded foam - softer in the back section and firmer in the front - indicated by the split.

The pelvis gently 'sinks' and is supported in the softer section in the correct seating position at the back of the chair. Firmer foam at the front discourages the pelvis from sliding forward into the slouching "C" curve of poor posture. The moulded (or shaped) foam also encourages and improves blood circulation behind the thighs. With the added adjustable lumbar support the spine is maintained in the healthy, upright "S" curve of good posture which also creates less stress on the arms, shoulders and neck throughout the day.

Scientific evaluation

Gregory uses scientific evaluation in the testing of its products. Thermographs show surface temperatures and indicate the difference in blood flow in the body after sitting over a period of time in a Gregory chair compared to an ordinary chair. Surface temperature is a function of the heat imparted by the body's circulation system. This means that warmer temperatures on the body's surface shows greater blood flow in the measured area. Small changes in surface temperature indicate larger changes in the deeper tissues. White areas show increased blood flow.

- > The standard by which all others are measured
- > Product design excellence and exceptional ergonomic performance

IMPROVE COMFORT, PREVENT

AA1200BA
Medium back clerical

- Full ergonomic adjustability for seat height, seat and back tilt
- Arm height can be quickly adapted to suit each individual's specific needs
- Small, standard and large seat options
- Heavy duty kit to support up to 160kgs available on large seat manager and extra high back manager chairs

AA3310H
Executive with deluxe aluminium base and fabric back

Inca range - ergonomic to the core

The Inca range provides an extremely comfortable and reliable solution to office seating and the demanding call centre or hot desk environments.

Inca is a complete range of seating from clerical, manager and high back executive chairs to conference, visitor and counter or drafting chairs and available in your choice of fabric, leather or medical/hospital vinyl coverings.

A robust range certified by AFRDI to Level 6 of the Australian Standard on the most popular clerical, manager and extra high back manager models. An Express range of Inca clerical and manager chairs in selected fabrics is available for quick delivery.
