

Glass Communication Boards

EQUIP

The stylish new Communication board
Writing is a breeze. Surface never stains.

Sizes : glassboards ® are available in a range of standard sizes. Sizes larger than this often have issues with lift access in high rise buildings. For larger areas ... simply place two units side by side.

Why Glassboards ® ?

Ideal for modern communication ... offering a **stain free** writing surface that accepts any standard whiteboard marker. Erasing is a breeze .. simply use a standard eraser.

The surface also accepts permanent markers which can be cleaned off using our Parrot whiteboard cleaning fluid. Ideal in meeting rooms, breakout areas and even formal boardrooms. Use anywhere communication points demand .. and where style is important !

glassboards ® can be supplied in either a clear finish .. or in your choice of any standard Dulux painted finishes. The 2 examples above show silver (looks fantastic) and Barrister White.

The painted backing is oven baked and is completely blemish free. So ... you can now have a completely colour co-ordinated office environment. Match the colour .. or have something interesting or contrasting .. the choice is now *yours* !

GB02	900x600	GB07	1500x1200
GB03	900x900	GB08	1800x900
GB04	1200x900	GB09	1800x1200
GB05	1200x1200	GB10	2000x1200
GB06	1500x900		

Installation

glassboards® can be installed onto any wall ... installation is via either 4 or 6 stainless steel brackets (sizes 1200x1200mm or less accept 4 brackets .. sizes larger than this we recommend 6 brackets .. 3 top and 3 bottom).

The glassboard is supplied to you predrilled with either the 4 or 6 holes. Installation generally takes 2 persons.

glassboard brackets are stainless steel and are designed to comfortably support any size board.

glassboards can also be installed directly onto any smooth clean wall using adhesive silicons. If this method of install is preferred .. there's really no need for the mounting attachments.

glassboard colours are baked (not just painted) and guaranteed to be blemish free and offer up to 20 years of long lasting product life.

Technical

- * 6.38mm toughened glass .. which is 4-5 times stronger than normal glass (toughened glass breaks it's into small harmless pieces .. like a car windscreen does)
- * All glassboard edges are polished and the corners are rounded for added safety and ease of use.

NOTE : Glassboards are supplied in original *clear* format .. however all glass has a slight green tint from the iron oxides used in making it. If you are matching colours *exactly* then this green tint can change the colour subtly.

We can however supply a *totally clear* glass called '**Starphire**' at an *extra cost*, which has the iron oxides removed for an 'exact colour' match.
